CONSENT AND RELEASE AGREEMENT MICROBLADING

It is very important that you read ALL of the information in this document, sign it, and send it back to us. This confirms that you understand our policies. We cannot do your procedure without it. Thank you for your understanding.

GENERAL

This form is designed to give information needed to make an informed choice of whether or not to undergo Microblading. If you have questions, please don't hesitate to ask. Although 3D Eyebrow Embroidery (Microblading) is effective in most cases, no guarantee can be made that a specific client will benefit from the procedure. Microblading is the process of inserting pigment into the dermal layer of the skin and is a form of tattooing. All instruments that enter the skin or come in contact with body fluids are either disposable or sterilized before use. Cross contamination guidelines are strictly adhered to. Generally, the results are excellent! However, a perfect result is not a realistic expectation. It is usual to expect a touch-up after the healing is completed. Initially the colour will appear much more vibrant or darker compared to the end result. Usually within 7 days the colour will fade 40-50%, soften and look more natural. The pigment is semi-permanent and will fade over time. It may need to be touched-up within 6 months to 2 years.

BEFORE YOUR PROCEEDURE

- ▶ It is best not to get a spray tan prior to the procedure.
- ▶ Reduce caffeine and alcohol intake the night before and the day of procedure.
- ▶ Having the procedure done close to the time of your menstrual cycle will increase pain sensitivity.
- ▶ It is best to avoid things that will thin your blood. If you are prescribed any medicines that thin your blood such as aspirin or ibuprofen please let us know before you make your appointment.
- ▶ Your treatment may be postponed if you are sunburnt, have an infection or inflammation in the treatment area. This includes pimples, skin rash and bruising.

ACTIVITIES TO AVOID AFTER THE PROCEEDURE (FOR 2 WEEKS!)

- ▶ Physically intense sport that will cause sweating
- ▶ Sun tanning beds or spray tanning
- ▶ Laser or Chemical Peel treatments including Retin A, Renova, Alpha Hydroxy and Glycolic Acids must not be used on the treated areas
- ▶ Swimming, saunas, Jacuzzi's or very hot baths
- ▶ Avoid touching the area unless applying after care treatment as instructed
- ▶ Do not use dye or tweezers on your eyebrows
- ▶ If in doubt leave it out!

AFTER CARE

After care is very important for producing a beautiful and lasting result.

- ▶ It's important not to get the brows wet during the healing process (5 - 7 days).
- ▶ Use clear antibiotic ointment for 24 hours, then switch to Vaseline/healing balm for the remaining 4 days. Apply the aftercare healing balm with freshly washed hands or a Q-tip/cotton swab. Use the balm very sparingly. Too little is better than too much. Blot off excess with a clean tissue. Never touch the procedure area without washing your hands immediately before, ensure that nothing is left on the brow.
- ▶ After 7 days keep the area clean by washing with freshly washed hands and a mild soap. Do not use a washcloth or sponge to remove soap. Simply splash with water. Do not use cleansing creams, acne cleansers or astringents. Use a mild, natural soap.
- ▶ Do not scrub, rub or pick at the epithelial crust that forms. Allow it to flake off by itself. If it is removed before it is ready the pigment underneath it can be pulled out.
- ▶ Do not use any makeup near the procedure area for at least 5 days.
- ▶ Use a sun block after the procedure area is healed to protect from sun fading.

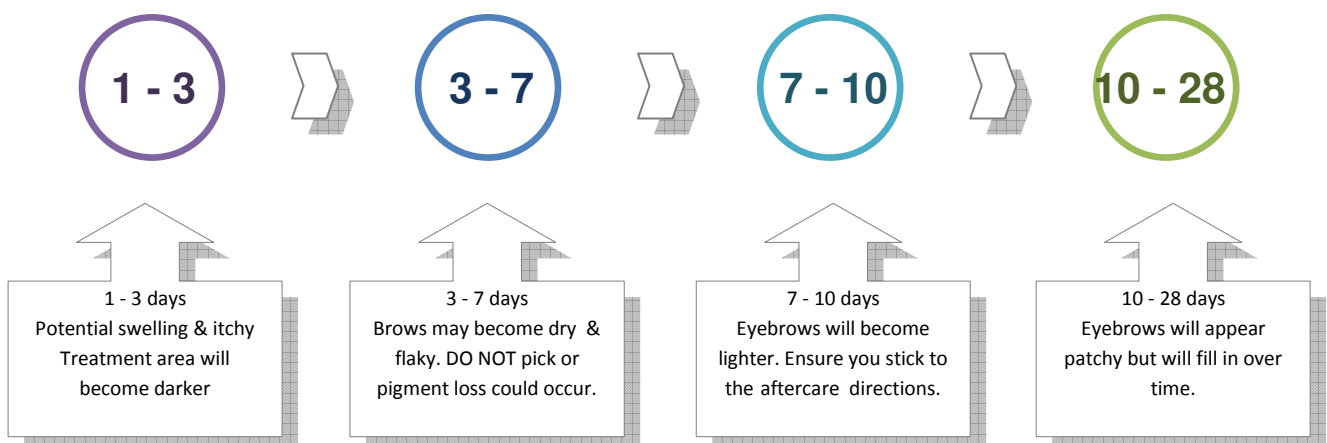

FAILURE TO FOLLOW AFTER-CARE INSTRUCTIONS MAY RESULT IN
INFECTIONS, PIGMENT LOSS OR DISCOLORATION.

WHAT IS NORMAL AFTER MY TREATMENT?

- ▶ **Mild swelling, itching, light scabbing, light bruising and dry tightness.** Ice packs are nice relief for swelling and bruising. Aftercare ointments work well for scabbing and tightness. Everyone will react differently where some get swelling for a few days others may get none at all.
- ▶ **Too dark and slightly uneven appearance.** After 2-7 days the darkness will fade, and once any swelling dissipates any unevenness usually disappears. If it is too dark or still a bit uneven after 4 weeks then we will make adjustments during the touch up appointment.
- ▶ **Colour change or colour loss.** As the procedure area heals, the colour will lighten and sometimes seem to disappear in places, this is typical after 10 days. Healing takes about four weeks.
- ▶ **Patchy appearance.** From 2 to 4 weeks your eyebrows can look patchy or not complete this effect will even out over the healing period. If the patchy appearance doesn't resolve fully we can address that during the touch up appointment which is why touch up is necessary. The procedure area has to heal completely before we can address any concerns.

We recommend the first touch up 30 days after the first session. Then every 6 months to 1 year to keep them looking fresh and beautiful.

HEALING TIMELINE

MEDICAL HISTORY

YES NO

- History of MRSA(Skin Condition)
- Diabetes
- Hepatitis (A,B,C,D)
- Aids/HIV
- Haemophilia or any bleeding disorder
- Herpes
- Serious Heart Condition, cardiac valve disease
- Pregnant / Breast feeding
- Autoimmune Disorder
- Cancer
